|--|---|----------------------------|---|----------------|---|----------------------------|--|---------------------------------|
| Line:<br>Category:   | Primer products<br>2k polyester bodyfillers and stoppers  |                            |   | Type:<br>Code: | Universal use polyester bodyfillers<br>1010.07                              |                            |  |                                 |
| Name or commercial logo: P90   |   |                            |   |                |   |                            |  |                                 |
| Nature:  | two-component chemical paste with a base of inert mineral fillers and additives dispersed in unsaturated polyester resins. It polymerizes through benzoyl peroxide paste in concentration between 1% and 3% w.p. according to the environmental temperature.  |                            |   |                |   |                            |  |                                 |
| Use:   | intended to be applied to fill or level out imperfections on surfaces of various kinds before applying the primers. With the exception of copper, and special stainless steels, it can be used on any type of metal supports including, after sanding, galvanized sheets (electrolyte / galvanized), aluminum and brass. It is possible the application on rust-proof primer, insulating and filling primers except for wash-based primers composed by acids hardeners and single component primers containing synthetic resins. If applied on old paint, make sure that they are completely dried and that they are not of acrylic thermosetting or elastic natured. |                            |   |                |   |                            |  |                                 |
| <ul> <li>Peculiarities:          <ul> <li>it is characterized by an excellent spreadability and sanding, good filling power and quick drying;</li> <li>due to a vacuum process, it leaves a smooth final surface, free from micro-holes, and very ductile to sand;</li> <li>excellent adhesion on fiberglass (UP-GF) reinforced resin supports and polyurethane foam;</li> <li>it is compatible with water-based coats.</li> </ul> </li> </ul>   |   |                            |   |                |   |                            |  |                                 |

| P90 ready for use plus 3% w.p. of hardener, VOC expressed in g/l: 89   |   |                            |   |                |   |                            |  |                                 |
| Applicative data:  |   |                            |   |                |   |                            |  |                                 |
| <b>Ξ</b> Πη de   | Roughen out the part to be worked with sand paper grain P 100. Then eliminate any trace of grease, oils, silicone, fingerprints, glues, detaching wax (over UP-GF) and dust by mean of an antisilicones thinner for washing (our type NOSIL SN/184). If applied on old varnishes roughen up with sand paper grain P 320.  |                            |   |                |   |                            |  |                                 |
| Ar   | Apply with a filler knife or with a plastic or rubber spatula, even in successive coats, expanding over the area to be repaired.  |                            |   |                |   |                            |  |                                 |

| <ul> <li>Read carefully the Technical Data Sheets before use;</li> <li>Product specifically for PROFESSIONAL USE;</li> <li>Do not exceed the dose of hardener and carefully amalgamate the filler-hardener mix to avoid the formation of coloured marks on the varnish, especially with metallic, pearly and opalescent coloured paints;</li> <li>Do not apply the filler on cold rests (&lt; 10 °C), its sticking power would be compromised and drying times could be longer;</li> <li>Do not put residue from the A+B mix back into the container of the filler, the content would harden.</li> </ul> |   |                            |   |                |   |                            |  |                                 |

## Consumer information:

The information here contained are based on our knowledge at the moment. We reserve the right to make changes in the characteristic data of the product in relation with technological progress or productive developments. Due to factors beyond our control in the applicative phase of the product, the information here contained are not a form of guarantee for specific qualities of the product itself, nor its suitability for a specific application. If a responsibility is determined, this will be limited to the value of the provided products used by the consumer. We guarantee however the constancy in the quality of our products. Our responsibility concerns only the area of the General Sales Conditions. This Technical Data Sheet supersedes all the previous.
